SUMMARY

Senior UX Designer with 4+ years of experience designing trading and investing apps at FYERS. I have been promoted twice and was handpicked by the company's Chief Experience Officer (CXO) to join its Innovation Lab. I have designed and launched 10+ products used by real traders, including Portfolio, Option Chain and a Partner Dashboard I designed directly with the CEO and CXO.

I don't just design, I also build. I created FYERS Academy, a working learning app for Android, in 3 months using AI tools. I hold NISM Series 7 and 8 certifications, so I understand the stock market as well as design.

WORK EXPERIENCE

FYERS | Bengaluru | Jul 2022 – Present

Senior UX Designer, Innovation Lab Apr 2025 – Present

- Handpicked by the CXO to join the Innovation Lab, a small team that explores new product ideas using design, technology and AI. I handle research and design, from understanding the problem to a working product.
- Designed and built FYERS Academy, a learning app for Android with 60 lessons, in 3 months. I designed every screen myself and built the app using AI coding tools (Claude Code, Claude Design, VS Code and GitHub). It is easy to use with one hand and works in both light and dark mode.
- Tested Academy with 15 to 20 colleagues before its public launch, and the feedback was positive throughout.
- Created Learn by Doing, a practice feature where users trade on real past market situations without risking any money. I added it to Academy so every lesson comes with hands-on practice.
- Led research and design for a new investment advice product. I interviewed 50 investors, from beginners to experienced traders, to learn whether they prefer advice from a person or from AI, whether they would trust AI answers if shown the proof behind them, and how they research investments and news. The project was paused when business priorities changed.

UX Designer II Jan 2024 – Mar 2025

- Led the design of Portfolio, the screen where traders see their current trades and investments, on both mobile and web, from first sketches to handing final designs to developers.
- Designed quick order windows on charts, so traders can buy and sell without leaving the chart they are watching.
- Designed Option Chain and Advanced Screeners, tools that help traders compare options and find stocks. Both launched to live users and are easy to use with one hand.
- Redesigned the Home and Overview screens so users can find their way around easily and see their account at a glance.
- Helped redesign the Watchlist, adding tags and pinning so traders can organise the stocks they follow.
- Designed a trading journal that automatically collects users' trades and marks each one as profit or loss, so traders can learn from their past trades. This was part of the work that kept users coming back as FYERS reached 100,000 customers.
- Interviewed candidates and helped hire 3 to 4 designers into the team.

UX Designer I Jul 2022 – Dec 2023

- Designed the Partner Dashboard directly with the CEO and CXO. It gives 150+ partners one place to track their accounts, clients and earnings, get help and raise support requests. It is easy to use with one hand and works in light and dark mode.
- Led the design of the My Account app over 6 to 8 months, from first sketches to clickable prototypes, including gifting stocks, accounts for children and updating an address.
- Designed account opening, onboarding and adding funds, the first steps every new customer takes. All launched to live users and are easy to use with one hand.
- Designed account opening for NRIs and companies with the onboarding team, bringing every type of customer into one simple sign-up flow.
- Designed a 30-day challenge that rewards users for coming back every day. This was part of the work that kept users coming back as FYERS reached 100,000 customers.
- Designed the News section, both on its own and inside Portfolio, and helped with the Noticeboard.

UI/UX and Graphic Design Intern, DeFiner Remote | Jan – May 2022

- Designed logos, website screens and mascots for a crypto finance company.

HONORS AND AWARDS

- FYERS Force Award for the best project successfully launched
- Exceptional Team Player Award, nominated by the entire design team

VOLUNTEERING

Volunteer, Dubai Design Week Dubai, UAE | Nov 2021

- Supported design graduates with their project work at the Global Grad Show, an international exhibition of graduate design projects.
- Relayed key information between the host and exhibitors, and helped organise and manage communications for the show.

SKILLS

- **Design:** designing products from start to finish, user flows, wireframes, interaction design, prototypes, design systems, designing for one-handed use, light and dark mode
- **Research:** user interviews, usability testing, user and market research, turning research into clear findings
- **AI and building:** building working apps with AI tools such as Claude Code and Claude Design, plus VS Code and GitHub
- **Tools:** Figma, FigJam, Framer, After Effects, ElevenLabs, HeyGen

CERTIFICATIONS

NISM Series 7 · NISM Series 8 · Google UX Design · Georgia Tech Introduction to UX Design · AI for Designers (IxDF) · The Design of Everyday Things (IxDF)

EDUCATION

B.Tech, Electronics and Communication Engineering 2017 – 2021 | CGPA 9.03

Christ (Deemed to be University), Bengaluru

- Final project: BEAM, a student collaboration app; led UX and front end in a team of 5, used by 50+ students across 10+ colleges.
